This implementation can compress or decompress raw data by reading from stdin or from files. It's faster than most other compressing programs, and it has an efficient memory-usage. LZ4 - a real-time data compressor LZ4 compression is optimized for compressing small-sized data blocks. The compression ratio is very high, typically higher than 80-90% on 32-bit systems. LZ4 can be used for streaming data compression, it's very fast, and it has an excellent compression ratio. Simple-standalone decompression Simple-standalone decompression is an ideal compression for video, audio, fonts and images. Compress video, audio or images and you can also get quick decompression with LZ4. Fast and easy development LZ4 is written in a very easy to use C programming language. You can find all the details in the user's manual. LZ4 is not an obfuscated code, or a lot of low-level assembler, you can also learn all the details by looking at the code. LZ4 can be combined with other algorithms, like huffman, gzip, etc. LZ4 has high performance, even when combined with a language or a library that's not optimized for compression. The pre-compiled binaries are optimized for the given system and CPU, the source code is required for compilation. LZ4 features: Portable implementation: LZ4 is a stand-alone decompressor, it does not require any other external library, it's portable (cross-platform). No dependencies: there are no licenses, patents, code obfuscation or other restrictions. You can freely use LZ4 in any program or service you like. Small footprint: LZ4 is only ~2.5 MB compressed on 32-bit systems, ~4.5 MB for decompression. High compression speed: it's a fast compression and decompression algorithm. LZ4 compression speed is close to the speed of the uncompressed data, but faster than gzip, and much faster than 7-zip and WinZip.
