A: The bonus money was paid out with in the very same day. So, I'm glad to inform you, that I'm not overstating the bug. I wish they would move him a little bit lower than the last rank because he is cheating too many people. Multiresolution analysis of the spin-density dynamic structure factor measured by inelastic neutron scattering. The dynamic spin-density structure factor, $S(q,\omega)$, in the (110) direction of antiferromagnetic BiFeO(3) at two different temperatures is investigated with a special emphasis on the high-energy (incoherent) region. The results are compared with the Fourier transform of the inelastic magnetic Compton profile, which is directly obtained from the experimental data by a multiresolution technique. This procedure represents the dynamic spin-density structure factor as a sum over the building blocks of the spectra (domains, impurities, phonons, etc.). The results indicate that BiFeO(3) is a spin-glass system with an energy scale which is much larger than the energy resolution and temperature of our experiment. Zuowei Zuowei () was a ruler of the Xianbei state Northern Yan from 448 to 454. He was a son of the Northern Yan ruler Anyan Yongji. In 449, the Xianbei ruler Mujue became angry that his daughter had been married to Li Heng, the Wusun ruler of Northern Wei, causing him to break relations with Southern Yan. The Southern Yan ruler Gongsun Hong, fearful of an invasion, allied with the Northern Yan and defeated Mujue. He renamed the city of Anyuan to Chengde, and changed the capital from Anyuan to Chang'an. In early 450, Li Heng was made the governor of Liang Province. In the spring of 454, He Wenyan's brother Liu of Northern Yan rebelled against Gongsun Hong. He killed Gongsun Hong in battle, and sent a representative to Northern Yan, and in 454, he married one of Gongsun Hong's daughters to Liu's son Liu Junji and changed Northern Yan's name to Northern Qi.
