Q: How do I use Node.js proxy modules with Rails? Say I have a Node.js server configured to behave as a proxy (req.connect, etc.) and I can access the proxy from the browser and make requests to it. How do I access Node.js proxy modules, such as the riak-cs proxy, from within a Rails app? A: Rack supports proxying requests to upstream servers by default if the request method is GET, HEAD, or OPTIONS. You can change this behavior in Rack::Utils. It is a bit of a pain to figure out, though. Here is the default rackup.rb configuration file that I use in production: use Rack::Session::Cookie, :key => '_myapp_session' use Rack::ConditionalGet, :if => '*GET, *HEAD, *OPTIONS' use Rack::Proxy, :url => '' use Rack::Lock, :timeout => '90' This is actually what is happening. This sends requests to to the Node server at This server then sends the request back to Rack/Node and returns the Node response. In a rails app, you'd do something like the following: get '/foo' do # make request to /foo in node.js render :json => {'foo' => 'bar'} return end This is quite a bit of extra overhead for no added benefit, though. I would recommend either configuring the proxy server on the Rails side using a gem like nginx-proxy or using Cowboy. A: I found this package that helps with proxying requests for the purpose of css/js/image rendering: Usage is easy, but requires installing a module on the controller side. The routes file would look something like this: namespace :proxy do post '/test/:id' => 'test#index' get '/test/:id' => 'test#show' end The config would be something like this: module Proxy def self.app # The location of the node server
