preferred proxy for different web sources. This is an interesting option if you use the internet to perform business tasks, or if you're using a public WiFi network. For example, you can use Proxy Changer to specify your proxy settings for several web portals like Netflix, Steam or Twitter. What's more, Proxy Changer can be configured to automatically change the

proxy settings, so you don't have to keep on doing it manually. If you are wondering how this tweak works, let me explain it. Every Internet source is associated with a proxy server. These servers need to be configured in order to work properly and deliver the information that the client is looking for. Proxy Changer allows you to configure your preferred

proxy settings. With its help, you can control the settings for Spotify, Google, Twitter, Netflix, and other web portals. With Proxy Changer, you can quickly switch between your preferred proxy settings and the ones which are set by Microsoft, so that Internet connectivity becomes much more fluid. The tweak also offers a very useful tool that can be

easily toggled from the tweak's interface. This tool allows you to quickly activate and deactivate Proxy Changer. Activating it will make Proxy Changer automatic when you restart. In addition, Proxy Changer provides the possibility to block certain web sites. And what's more, Proxy Changer has a built-in URL monitor that will notify you when you find a new URL. With

Proxy Changer, you can enable or disable Windows bundled proxy settings from Preferences > Network Connection > Proxy. With this tweak, you can control your internet connection proxy settings in the same way that Microsoft does it.
